_how to use this guide

Hello. If you're reading this, then you're part of the Todyl team, standing with us to shield and empower businesses against the cyber threats they face every day.

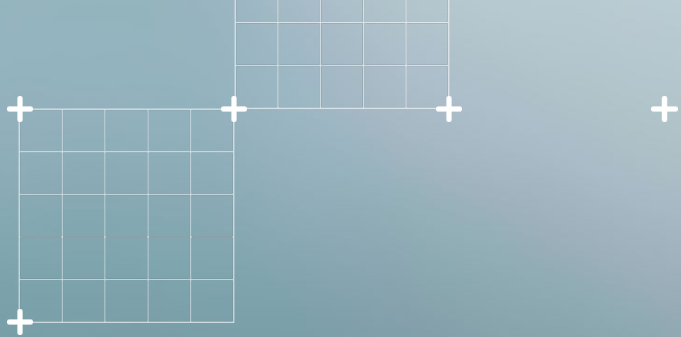

These guidelines have been crafted for helping creative types understand what makes our brand strong. They're also here for anyone else who speaks for Todyl or shares our story with the world.

Inside, you'll discover who we serve and how we connect with them. You'll notice our core beliefs, our new look, and real examples of communications to spark your own ideas.

Consider these pages guidelines, not strict rules. Every message brings its own chances to shine and hurdles to clear. We won't hold back your creativity. That said, when we stay consistent and clear, our brand builds trust and stands taller than the competition.

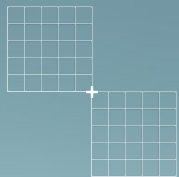

**You're shaping our brand every day.
Let's protect it together!**

 tofyl

_brand overview

_who is **todyl**

At Todyl, we protect what you build with straightforward, powerful cybersecurity solutions designed for small and medium-sized businesses and the MSPs who serve them.

Our mission is to empower IT professionals with the tools, insights, and automation needed to protect what they build and defend against ever-changing threats.

_what do we do?

Our streamlined, intuitive platform stops advanced threats, manages risks, and ensures compliance, helping SMBs protect what they build and grow with confidence.

The Todyl Platform delivers critical visibility across the entire IT environment, including:

- **Secure Access Service Edge (SASE):**

SASE provides a cloud-based solution that simplifies secure internet access and protects data for businesses with remote workers or multiple locations.

- **Endpoint Detection & Response / NextGen Antivirus (EDR + NGAV):**

EDR + NGAV uses advanced technology to safeguard devices like laptops and phones from malware and quickly respond to potential cyber threats.

- **Security Information & Event Management (SIEM):**

SIEM helps businesses monitor and analyze security alerts in real time, making it easier to defend against threats and meet regulatory requirements.

- **Managed eXtended Detection and Response (MXDR):**

MXDR offers expert-led monitoring and rapid response to cyber threats across devices, networks, and cloud services, reducing the need for in-house security teams.

- **Governance, Risk, and Compliance (GRC):**

GRC helps businesses organize policies, manage risks, and stay compliant with laws, supporting smooth and lawful operations

- **Security Automation:**

Security Automation streamlines repetitive cybersecurity tasks, like threat detection and response, saving time and resources for busy teams.

_why do we do it?

Small and medium sized businesses make sacrifices few of us even consider.

They are the heartbeat of the world economy and yet the cybersecurity industry too often overlooks them.

We believe every dream deserves a shield, and we have built our company to fiercely protect the businesses that matter most.

_small-to-medium business (SMB)

Small and midsize businesses have many shapes and dimensions but one common need: they face relentless cyber risks with limited resources. They lack the time to manage complex systems, struggle with data privacy and other regulations, risk customer lawsuits and reputational damage if a situation goes sideways, are staffed by overburdened IT Pros, and have trouble affording the protection they require. Lacking a solution tailored to them, SMB owners, managers, and IT staff will overspend on fighting fires and underinvest in their business growth.

_our audience

_managed service providers (MSP)

MSPs provide SMBs with technology infrastructure solutions including cybersecurity. They are mostly SMBs themselves and invest their trust in cybersecurity vendors. MSPs need tools developed for them, not enterprise-level, in-house IT teams with larger budgets and more personnel. MSPs are seeking straightforward and cost-effective solutions that enable them to generate profit margin, preserve their reputation, and protect their customers from increasingly sophisticated attacks.

_our campaign

We believe every business matters.

Whether it's a start up fighting to keep the lights on,
or a mid-sized managed service provider guarding what matters most;
Every dream deserves a shield.

Small and medium sized businesses make sacrifices few of us even consider.
They are the heartbeat of the World's economy.
And yet the cybersecurity industry consistently overlooks them,
always seeking bigger fish.

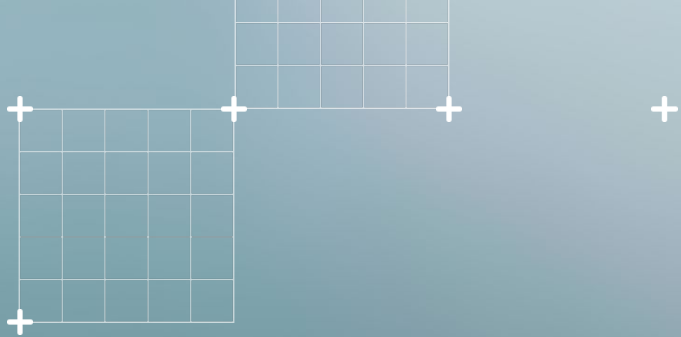

We don't do that.
We protect the businesses that matter most.
The overlooked. The overworked. The all-in.

We believe cybersecurity shouldn't betray ambition.
It should power it. It should feel like peace of mind.
And it should be strong enough to guard a dream.

You've done the hard part—building something from nothing.
Now, let's protect it.

 **todyl** _protect what you build

 tofyl

_visual guide

_visual overview

Our brand has been historically tech-centric, dark, and analytical — leaving little room for any emotional point-of-view or humanistic qualities. Our visual evolution was focused on standing apart from the competition and addressing this barrier of connecting with our audience in a deeper, more emotional and relatable way.

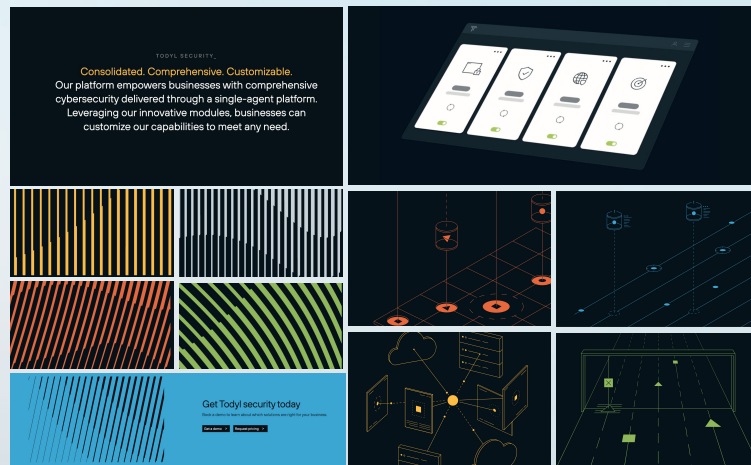

In the cybersecurity category, brands often play in an emotional space of fear, anxiety, and suspicions of impending danger. While tension is important for storytelling, we've consciously moved our visual language to feel more bright, white, and optimistic.

Human representations reflect our values and attitude—feeling aspirational, confident, forward looking, and empowered.

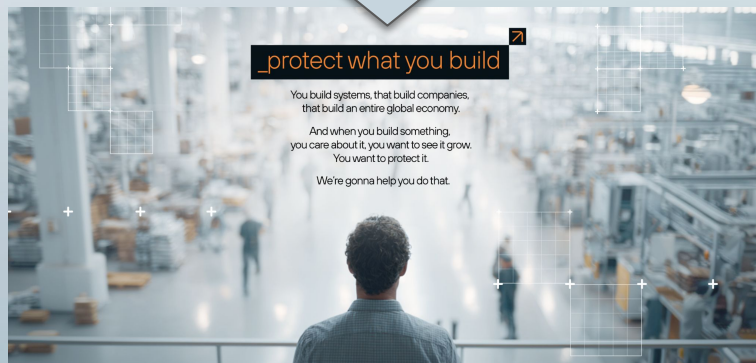

Technical graphic elements, color, and type are all used in a way to retain some of our original digital/scientific aesthetic and work as a bridge into some of our new elements.

In this section, we will review each visual element, how they are meant to work, and how they fit together to make up our visual language.

_original brand art elements and branding

_current visual evolution

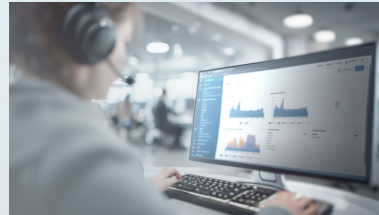

_key art

We've generated a set of AI images to help us launch our new visual identity and solidify a look for our photography and overall aesthetic. In addition to the overall style, we carefully staged the content to help portray some of the perspectives we will communicate, either from us/our product, or relating to one of our two audiences.

PRODUCT

Focus

on product, in active use, screen and software meant to be visible to give the solution a tangible presence in our storytelling

Prompt Formula for AI

[DESCRIBE THE SITUATION]
Medium shot of a computer monitor and keyboard as an IT worker is typing.

[DESCRIBE THE COMPOSITION]
The composition is over the shoulder of the IT worker who feels slightly blurred out in the foreground. The angle is such that the screen is in full view and in focus, maybe a slightly higher angle.

[DESCRIBE THE CHARACTERS]
The subject is not overly pretty, attractive, models, but should feel imperfect, real, and authentic with some unique character.

[DESCRIBE THE SETTING]
The setting is a modern, clean and sophisticated office space that is light and illuminated with lots of light grey tones.

[DESCRIBE THE STYLE]
Style is photographic and cinematic. Composition feels open and airy.

SMB

Focus

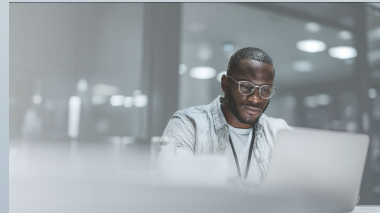

on the end client, their business, their perspective, secure, confident, forward looking outlook. Subject is older, more decision maker.

MSP

Focus

on the IT/frontline worker, their POV of getting work done, solving problems, confronting risk. Variety to show single-to-team dynamic or collaboration.

_photography stylings

We have an intentional approach to photography that is designed to distinguish our brand in the category and unify our communications.

Photography is treated or sourced to feel desaturated, light, and bright. It incorporates a range of cool grey tones and gives us a clean foundation for design. The light look is not only different for the category of security, but offers a more optimistic and confident outlook and feeling. The light look also has a natural technology forward appeal.

_raw AI generation

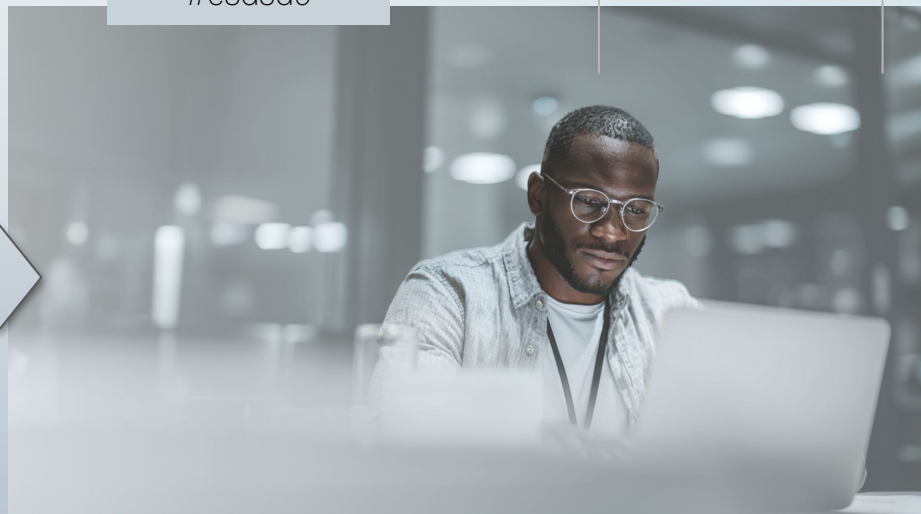

Aiming for a neutral to light grey that blends with our brand cool grey color

#c8d3d9

Subjects and focal points are given more saturation to stand out

Contrast is lowered and backgrounds are softened to allow for content

_retouched

_photography approach

We want to avoid looking like every other “stock” B2B technology company and stand for more. Follow these tenets when producing new photographic art:

TENETS...

Subjects and Staging

Photography is primarily used to capture our audience of IT pros, technical decision makers, and small business owners

Emotion and Acting

Photography helps us create a more human connection with our communications. Emotion in your subjects can illuminate our themes, such as: security, confidence, vision, safety, risk, challenge, perseverance, success, collaboration, and simplicity.

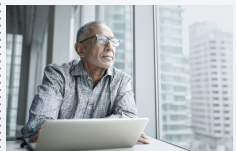

Styling and Effects

We maintain a consistent look in all photography

Composition and Creating Interest

There is plenty of room to push the arrangement of the shot or the interplay of subject and setting to get more conceptual, creative, or tell a deeper story.

DO...

DO choose subjects that feel:

- Real and authentic, posed in a natural way
- Represent a range of race, gender, and age.
- Posed to elaborate a message or theme
- In an appropriate context/situations/setting

DO let your subject feel:

- Expressive
- Natural
- Authentic

DO stylize or source to feel:

- Naturally light, white/grey and bright.
- More like a of a film filtered

DO think about:

- Finding interesting angles and crops
- Perspective of the subject
- Ways to add a cinematic or dynamic feeling

DON'T...

DON'T choose subjects that feel:

- Generic, cliché, a trope
- Obviously posed, stiff, or staged
- Placed in uninteresting or overused setting

DON'T let your subjects look:

- Over dramatize the emotion
- Telegraphing an idea or theme.
- Posed or looking directly at camera.

DON'T stylize or source to feel:

- Overdone, artsy or highly modern
- Obvious with fading out or gradients
- Clinical or sci-fi

DON'T be:

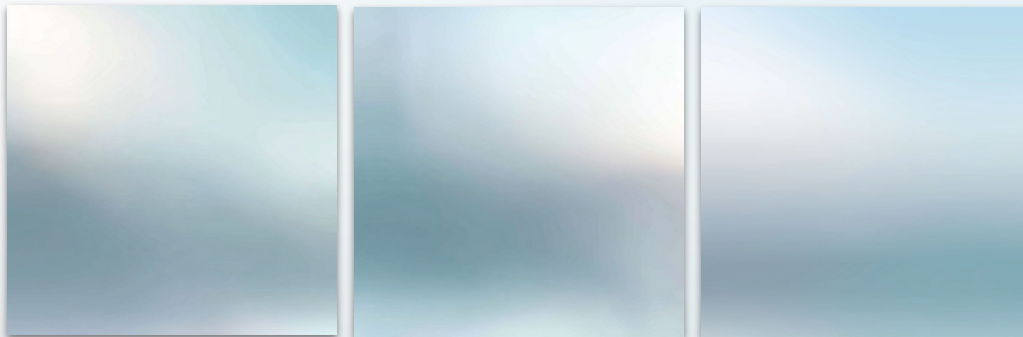

- Boring or plain
- Like everyone else

_texture art

For generic situations, or communication that is digging deep into solutions -- moving from emotional storytelling into functional/benefit storytelling -- we have more neutral background assets that carry through the visual look but allow the content to be more of the focus.

NEUTRAL

These gradient washes carry through our photography look and provide a neutral backdrop for layout situations where lifestyle photography is not suitable.

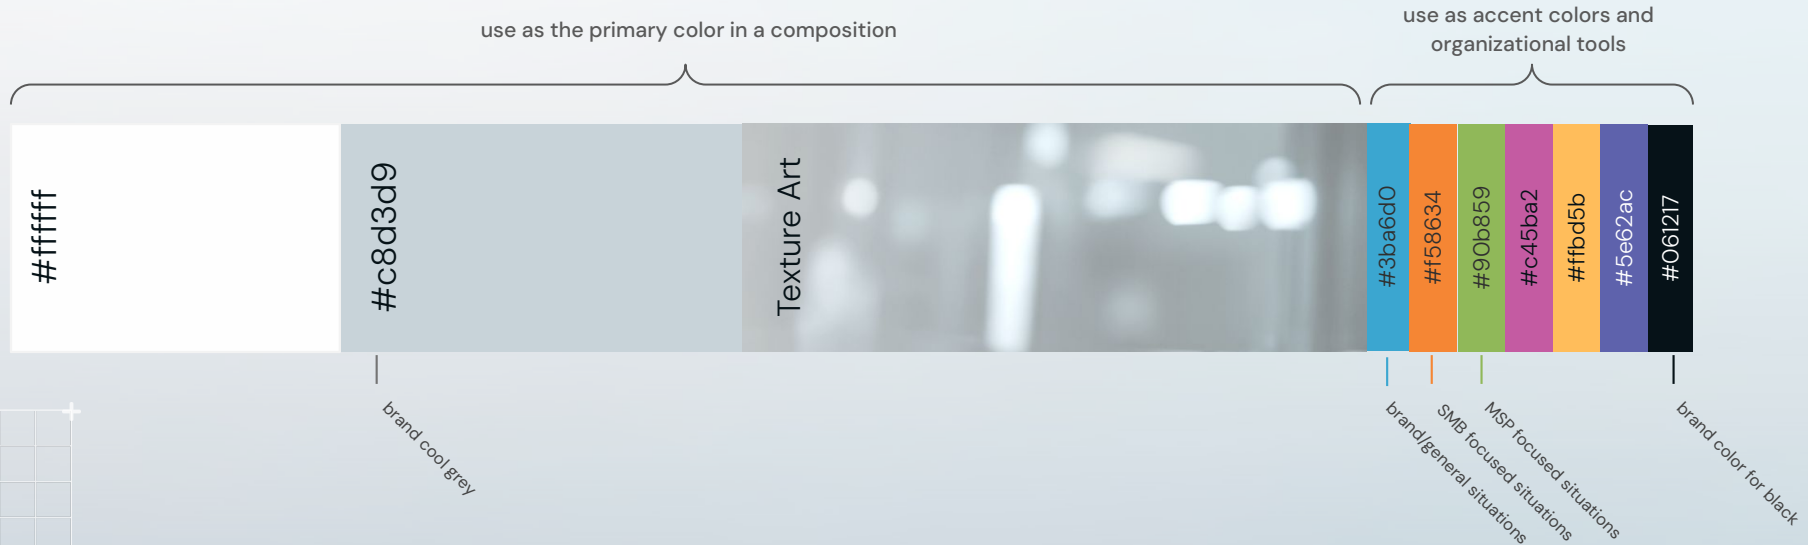

ENVIRONMENTAL

These blurred backgrounds work in a similar way but carry through some light theme connections to business and technology. These are meant to be cropped into neutral sections that accommodate layout.

_color usage

The desaturated photography stylings provides us an opportunity to have pops of color lead the eye through a composition, highlight important information, or provide a subtle audience pathway through content.

_typography usage

Typography is one way in which we retain some of our original digital and technological brand attributes. In addition to using the correct fonts, kerning, and leading recommendations, these are additional considerations that help keep our type looking consistent and ownable:

Use of a thinner face

Gives us a more delicate and intentional feeling

Use of an underscore “_”

At the beginning of a headline (or elsewhere when appropriate in a composition) echoes a coding language quality that makes us feel more digitally driven

Use of lowercase in headlines

Where title casing normally would be the standard, using lowercase creates an informality and directness, as well as nodding to our main logo mark lowercase styling

Use of a highlight shape

When an important word or concept is present, using a highlight shape with our accent colors can help draw attention

Use of containment shapes

When text needs to be integrated into a composition, but requires more attention or legibility, a square shape is used to contain the copy unit to guide the eye or anchor the content

_accessibility

Please take care when using our colors and background art in combination with typography to ensure appropriate contrast is maintained for legibility for a broad audience.

- Low contrast areas on key art have been pre-arranged for copy to live over, however more separation may be appropriate.
- Texture art may be lightened or darkened to allow for the appropriate contrast.
- Consider how text size and font weights may also contribute to legibility
- Or, when in doubt, use a containment shape to help separate copy units.

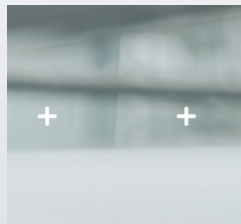

_graphic elements

Graphic overlay elements are typically applied over photography as an additional layer of ownability to our look. These are meant to be subtle cues to imply a sense of “construction” or “building” echos the concept.

_grids

Helps the content feel like it is taking form or that there is an underlying structure that has been built.

_registration marks

Helps the content feel digital with a sense of alignment, planning and organization.

_arrow

Helps point to things or directionally guide the eye, has an active quality to “start” or go somewhere next, so it is also a key part of our logo lockup

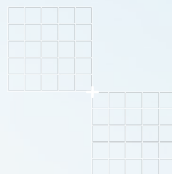

_application

Elements are generally placed to frame content, guide the eye, and add a technical layer to our photography style. Use of a design grid is recommended to keep the elements feeling accurate and mathematically spaced and aligned. This perfection helps the overall composition have the right technology feeling.

_tagline & lockup

The tagline is the summary of our positioning and distillation of our campaign. It is recommended in most communication scenarios, but not required. The idea may also come through in headlines or copy, so ensure that it never feels redundant to other content in the communication. It is best used as a end summation to a communication or a “period” at the end.

We have also included a logo lockup version to aid in layout construction. Please observe master brand guidance for logo usage and adhere to the clearspace and size requirements outlined below.
